To prepare students for competitive debate in multiple formats, expose them to academic research methods and materials, encourage complex critical thinking, and to develop public speaking skills Magnet academy is launching this year's summer programs. Students will learn speed reading, technical argumentation, public speaking skills and reading comprehension. Debates will occur Dailey and in an intensive format that builds on previous sessions. Camps are taught from the same idea logical perspective: beginning debate is public forum, intermediate is LD, and advanced is policy.

The program's goals are to allow students to use math and computer code to think creatively. Computer programming offers a bright future for young individuals and we believe that our course will provide the guidance and steps in this direction. Python is one of the most popular programming languages in the industry today. The language was designed with the newcomer in mind and working knowledge of Python offers a good foundation. Its methodologies are used in many programming languages and it is a great stepping-stone because it will provide the building blocks you need to branch out further. Python can be used in a fun and exciting way.
